<b>ELECTRICITY 190</b>			
<b>FOREWORD</b>			
The tariffs and charges given hereafter are subject to revision from time to time and confirmation thereof must be obtained from the Electrical Department.			
<b>ABBREVIATIONS</b>			
A – Ampere ADMD – After Diversity Maximum Demand (BDMD x Diversity) BDMD - Before Diversity Maximum Demand (usually at supply meter) EBSST – Electricity Basic Support Services Tariff ERU – Equivalent Residential Unit FBE – Free Basic Electricity kWh – Kilowatt-hour or also referred to as units kvarh – Reactive kilovolt-ampere-hour kVA – kilovolt-ampere kV – kilovolt NERSA – National Energy Regulator of South Africa NMD – Notified Maximum Demand PF – Power Factor R – Rand TEE – Town Electrical Engineer or Head of Electrical Department TOU – Time-of-Use V – Volt			
<b>DEFINITIONS</b>			
<b>(Active) Energy Charge</b> – charge per kWh of electrical energy supplied in the month. The Active Energy Charge for TOU tariffs is differentiated into high-demand (June to August) and low-demand (September to May) seasons. <b>Council</b> – Kouga Municipal Council			
<b>Environmental Levy</b> – a government levy charged on electricity produced by non-renewable generators. It is applied to the total kWh supplied to the customer in the month. This levy is included in the tariffs hereafter. <b>Equivalent Residential Unit</b> – is considered to be a Residential Consumer with a 45 Amps single phase (10,35kVA) supply at 230 Volts nominal. <b>Free Basic Electricity</b> – 50 Free units per month of electricity are given to consumers who qualify for the Electricity Basic Support Services Tariff in terms of Council's policy. These units are only applicable to the first purchase every month, and are not transferable from one month to another. <b>Municipality</b> – Kouga Municipality <b>Maximum demand</b> - the highest averaged demand measured in kVA during a 30 minute integrating period during all time periods. <b>Network Access Charge</b> – charge payable per month for the highest of either the NMD (minimum 60kVA) or the highest maximum demand reading during the previous 12 months. <b>Network Demand Charge</b> – charge payable per month for the chargeable demand supplied per month. No Network Demand Charge is applicable during Off-peak periods for TOU tariff. <b>Notified Maximum Demand</b> - the maximum demand notified in writing by the Customer and accepted by the Municipality. <b>Power factor</b> – the ratio of kW to kVA measured over the same integrating period. <b>Single phase supply</b> – a 50Hz AC supply at 230V rms phase to neutral. The neutral carries the full load current. <b>Three phase supply</b> – a 50Hz AC supply at 230V rms phase to neutral; 400V rms phase-to-phase (120 degree phase displacement). <b>Time-of-Use (TOU) tariff</b> – a tariff that has different energy rates for the same tariff component during different time periods (peak, standard and off-peak) and seasons (high and low demand) in order to reflect the shape of Eskom's long-run marginal energy cost of supply at different times more accurately. <b>Reactive Energy Charge</b> – charge applicable for every kvarh registered in excess of 30% (0,96 PF) of the kWh supplied during Peak and Standard periods. The excess reactive energy is determined per 30 minute integrating period and accumulated for the month and will only be applicable during the high demand season (June to August).			
<b>AVAILABILITY CHARGE</b>			
Charges applicable to erven that are not connected to the electricity supply network, but which could reasonably be connected to the network:

<b>Upgrade existing connection</b>	Plus VAT	Cost + 20%	Cost + 20%
<b><u>A Transformer Fee and/or an Augmentation Levy will be payable in addition to the above connection and upgrading fees, where applicable.</u></b>			
<b><u>Transformer Fee</u></b>			
The Transformer Fee is the pro-rata contribution a Developer or Consumer makes towards sharing the cost of an existing distribution substation of which some of the spare transformer capacity is utilised to make the supply available. The Transformer Fee is a cost per kVA and is based on the additional kVA required by an existing consumer over and above the present supply capacity, or the total kVA required by a new Development less the existing allocated capacity, if applicable.			
The kVA charge is based on the cost of a typical substation, i.e. average size 315kVA miniature substation including an 11kV ring main unit, plinth and earthing. The cost also includes the installation cost and municipal planning and administration charges. It further assumes that the average supply capacity is 80% of the substation's rating. The cost per kVA is therefore equal to the substation cost divided by 80% of 315kVA. The estimated cost of the typical substation and the charge per kVA is determined annually at the beginning of each financial year by Treasury with the assistance of the Electrical Department.			
After an application has been received, the Electrical Department will calculate the required kVA on which the charge will be applied. The required kVA will be based on the Developer or Consumer's After Diversity Maximum Demand (ADMD) at substation level.			
Based on substation cost		348 000.00	340 000.00
Charge per kVA	1 573.00	1 380.00	1 350.00
<b><u>Augmentation Levy</u></b>			
The Augmentation Levy is a new Development's contribution towards the upgrading of Kouga Municipality's Primary Electricity Distribution Network to make provision for the load which this development will impose on it.			
Developments for which the levy shall apply are:			
<ul style="list-style-type: none"> <li>• Major developments</li> <li>• Small townships and minor developments</li> <li>• Minor subdivisions and applications for an increased supply</li> </ul>			
The Primary Network is taken to comprise those parts of the network whose function it is to deliver electrical energy from the Eskom Point of Supply to the various load centres within the Municipality's licensed area of supply. It includes the feeders from the Point of Supply to the Main Intake Substation/s, the latter substation and all major substations used to switch and control the supply of electricity, and the overhead lines and underground cables linking these substations.			
The key principles for applying the Augmentation Levy are:			
<ul style="list-style-type: none"> <li>• Private developments must not place any financial burden on existing residents and consumers.</li> <li>• Developers must be treated fairly and neither they, nor residents in new townships should be made to subsidise existing residents.</li> </ul>			
In calculating the levy, the aim is to establish an equivalent average charge per Equivalent Residential Unit (ERU).			
The average cost per ERU is determined by pricing a model of the Primary Network, which is as close as possible to the actual network, and then divide it by the ERU's it can supply.			
The total charge to the Development will be the calculated number of ERU's of the Development multiplied by the Charge/ERU.			
An ERU is considered to be a Residential Consumer with a 45 Amps single phase (10,35kVA) supply at 230 Volts nominal.			

SERVICE DESCRIPTION	2011/12		2010/11
	VAT Inclusive R	14% Exclusive R	14% Exclusive R
The Factors/Formulae used to calculate the number of ERU's are contained in the following table			
<b>Description</b>	<b>No. Of ERU's</b>		
<b>Domestic Erf/Consumer: (30 to 60A)</b>			
<u>New Developments:</u>			
BDMD = 45A (10,35 kVA) single phase	1		
BDMD > or < 45A single phase but limit to 60A	Amps required ÷ 45		
BDMD = 45A three phase	3		
BDMD > or < 45A three phase but limit to 60A	Amps per phase ÷ 45 x 3		
<u>Existing Consumers:</u>			
Upgrade from tariff circuit breaker ≤ 60A single phase to ≤ 60A three phase	2		
<b>Commercial Erf/Consumer: (30 to 100A)</b>			
<u>New Developments:</u>			
BDMD = 45A single phase	1 x 0,5 (Nf) = 0,5		
BDMD > or < 45A but limit to 60A single phase	Amps required ÷ 45 x 0,5 (Nf)		
BDMD = 45A three phase	3 x 0,5 (Nf) = 1,5		
BDMD > or < 45A but limit to 100A three phase	Amps/phase required ÷ 45 x 3 x 0,5 (Nf)		
<u>Existing Consumers:</u>			
Upgrade from tariff circuit breaker ≤ 60A single phase to ≥ 30A but ≤ 100A three phase	[Amps per phase required ÷ 45 x 3 x 0,5 (Nf)] - 0,5		
Upgrade from tariff circuit breaker ≥ 30A three phase to ≤ 100A three phase	[Amps per phase required ÷ 45 x 3 x 0,5 (Nf)] - [Present amps ÷ 45 x 3 x 0,5 (Nf)]		
<b>Bulk Supply Erf/Consumer (≥ 60 kVA)</b>			
<u>New Developments:</u>			
BDMD = 45A single phase	(Notified Demand in kVA x Nf) ÷ (10,35 x Df)		
<u>Existing Consumers:</u>			
Increase Notified Demand	[(New Notified Demand in KVA - Notified Demand in Agreement) x Nf] ÷ (10,35 x Df)		
<p>45 - ERU amps (10,35 kVA)</p> <p>3 - No of Phases</p> <p>0,5 - Average Network Factor for commercial consumers</p> <p>Nf - The symbol "Nf" signifies the Network Factor and is used in the formulae for Commercial and Bulk Supply consumers to take into account that their peak demand may not coincide with the peak demand on the core network. For Commercial consumers this was taken as an average of 0,5. No value is given for the Network Factor (Nf) for Bulk Supply Consumers since this varies substantially depending on the type of load, and since there are fewer Consumers in this category it is not fair to use an average value. The limits will, however, be between 0,5 for say a commercial/industrial type of development with 50% of its peak load coinciding with the core network peak, and 1 (one) for say a domestic development where 100% of its peak load coincides with the core network's peak. The value for a particular development can, however, be anywhere between these limits and will be determined by the Head of the Electrical Department or his appointed Consulting Engineer.</p> <p>Df - Diversity Factor between BDMD and ADMD determined by Head of the Electrical Department or his appointed Consulting Engineer. The Df depends on the quantity and type of individual loads connected to the Bulk Supply Point. The following Df's are given as a guide:</p> <p><u>For Domestic Developments</u></p> <ul style="list-style-type: none"> <li>• ≤ 60 kVA Notified Demand = 1Df</li> <li>• &gt;60 kVA Notified Demand but ≤ 80 kVA = 0,75 Df</li> <li>• &gt;80 kVA Notified Demand but ≤ 100 kVA = 0,58 Df</li> <li>• &gt;100 kVA Notified Demand but ≤ 200 kVA = 0,38 Df</li> <li>• &gt;200 kVA Notified Demand = 0,3 Df</li> </ul> <p><u>For Commercial Developments</u></p> <p>Use same Df's as Domestic but for "Notified Demand" in formula use Demand after taking Nf into account, i.e. Actual Notified Demand x Nf. For most commercial developments this will be Actual Notified Demand x 0,5</p> <p>BDMD - Before Diversity Maximum Demand (usually at supply meter)</p> <p>ADMD - After Diversity Maximum Demand (BDMD x Df)</p>

or equal to one month's account as rendered or as determined by the CFO calculated on the average of the account.			
<b>DOMESTIC CONSUMER TARIFFS</b>			
This tariff covers the supply of electricity for domestic use in private dwellings, flats and chalets with separate meters and includes churches, schools, welfare buildings, hospitals, halls or similar premises with circuit breaker sizes not in excess of 60A single phase or 60A three phase. Should Consumers require supplies in excess hereof, the Commercial Consumer or Bulk Supply tariff will be applicable.			
<b>Prepayment Meters</b>			
<b>Multiple Meter Installations</b>			
Where the Municipality has agreed to install more than one prepayment meter on an erf, for example a block of flats, group housing scheme or granny flat, the Owner or the Body Corporate will take responsibility to maintain and insure the complete network inside the boundaries of the erf, and each consumer (meter point) will be separately charged as per the appropriate tariff as detailed below, which includes the Basic Charge where applicable.			
The Basic Charge (e.g. if there are 10 consumers, it will be 10 x the Basic Charge) will be invoiced on the monthly rates and taxes account of the Owner or Body Corporate, who will in return recover this from the respective Consumers.			
The total capacity made available to such an erf may not increase beyond the original design allowance for the specific erf on the network supplying the immediate area.			
Should more capacity be required, an application must be made to upgrade the specific supply, in which case the normal charges will become payable, ie. Upgrading Fee, Transformer Fee and Augmentation Levy.			
<b>Single Phase Supply</b>			
<b>Sub Economic (20A) with FBE</b>

<b>TIME OF USE (TOU)</b>			
This tariff is for consumers with a minimum notified demand of 60kVA or who require a supply greater than 100A three phase circuit breaker size, and who are able to manage their energy consumption according to Eskom's specified time schedule, i.e. Peak, Standard and Off-Peak for the "Megaflex" tariff.			
Consumers must have the necessary electronic metering equipment installed and correctly programmed for this tariff at their cost.			
Where existing Consumers consider conversion to TOU, it will be the the Consumer's responsibility to do a tariff study.			
At least 6 months TOU data (3 x high demand season and 3 x low demand season) must be available before the conversion can be implemented.			
A change of tariff will apply for a minimum period of 12 months with three months mutual notice thereafter. Meters are generally read once a month. Estimated charges are raised in months during which no meter readings can be taken and these are subsequently adjusted when actual consumption is charged for.			
<b>Low Voltage (&lt; 500V)</b>			
Consumers that are metered in bulk TOU at 400/230 volt with an installed capacity of 500kVA or less.

<b>SEWERAGE</b> <span style="float: right;"><b>780</b></span>																			
<p>The sewerage charges are calculated on two main components per erf. The first portion is based on a fixed cost for each erf and the second portion is based on actual measured water consumption (hydraulic portion) for an erf.</p> <p><b>Fixed Charge</b>                      The <u>Fixed Charge</u> provides for costs on the sewerage operating budget such as charges for capital loan and interest payments and provision for a capital reserve fund. This cost is indicative of the installation /construction, rehabilitation and eventual replacement cost of the infrastructure. The cost is fixed for every property which has access to the municipal sewerage system irrespective of the property being vacant (no buildings) or, if the property uses the existing system, including the suction tanker service.</p> <p>The fixed cost component is therefore payable irrespective of the service being used by the consumer or not, therefore this charge will effectively replace the current "Availability Fee".</p> <p>The fixed charged per erf is based on the sewage conveyance and treatment cost for an average monthly water consumption per erf which is exceeded by 80% of consumers in the particular category.</p> <p><b>Hydraulic Charge</b>                      The proposed tariff will also obviate anomalies which exist currently whereby owners of properties in some consumer categories are heavily subsidising users in other categories. With the present tariff in certain instances domestic consumers are also subsidising commercial consumers.</p> <p>The tariff will uniformly apply to all categories of consumers (Sewerage Service) throughout the municipality. Sewage discharge will be calculated on actual metered water consumption that will be reduced by a "discharge factor" i.e. the ratio of kilolitres sewage discharged by each category of consumer, to be determined by the Director: Technical Services. Whilst a standard tariff per kl of sewage will be levied, the discharge factor applicable to the different categories may differ.</p> <p>The formula used to arrive at the new hydraulic tariff, is as follows:</p> <p>P = KVC where,                      P = sewerage charge in Rand                      K = effluent discharge factor                      V = volume(kl) of potable water consumed                      C = prescribed charge in Rand</p> <p><b>Rebate of 10% for –</b>                      Bulk Consumers/ Private Developments &gt;2Ha, restricting admission, which pay bulk and "on-sell" to patrons within the development and which develop and maintain their own infrastructures.</p> <p>See table detailing categories and discharge factors below.</p> <p>The hydraulic portion of the sewerage charge consists of two components :</p> <p><u>Minimum Consumption Charge</u>                      This is the portion of the sewerage charge to provide for firm operating costs such as salaries, plant and equipment, etc and certain general expenses. The charge is the average cost per erf for a particular category and is based on the firm/fixed cost incurred by the Sewerage Service to operate the sewerage system irrespective of what volume of sewage is conveyed and treated.</p> <p>The minimum consumption charge is therefore also necessary irrespective of the service being used by the consumer continuously or infrequently.</p> <p>The first part of the hydraulic charge is calculated on a percentage of the minimum water consumption specified per erf for each category</p> <p><u>Variable Consumption Charge</u>                      This is the portion of the sewerage charge to provide for the operating costs that vary depending on the amount/extent of consumption. Electricity consumption, pump maintenance and repairs, etc are typical costs that increase when the sewage flow increases.</p> <p>Nevertheless, during prolonged periods of low flow e.g. during a drought when water restrictions apply, the operating cost can actually increase although less sewage is discharged. Due to low flow the frequency of sewer blockages increases which requires more frequent sewer cleaning with high pressure jetting equipment as a preventative measure.</p> <p>The second part of the hydraulic portion is calculated on the water consumption in excess of the specified minimum volume up to a specified maximum consumption per erf for domestic categories. No maximum consumption applies to commercial categories.</p> <p><b><u>Sewerage Tariff Categories and Discharge Factors</u></b></p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th></th> <th style="text-align: center;"><b><u>Discharge (T04)</u></b></th> <th style="text-align: center;"><b><u>Minimum (kl/month) (T05)</u></b></th> <th style="text-align: center;"><b><u>Maximum (kl/month) (T06)</u></b></th> </tr> </thead> <tbody> <tr> <td>Offices (Com1) Offices</td> <td style="text-align: center;">0.98</td> <td style="text-align: center;">10</td> <td style="text-align: center;">No Max.</td> </tr> <tr> <td>Restricted Business A (Com2) Funeral Parlours Licensed Bottle Stores / Pubs / Taverns Offices Supermarkets Shops</td> <td style="text-align: center;">0.98</td> <td style="text-align: center;">15</td> <td style="text-align: center;">No Max.</td> </tr> <tr> <td>Restricted Business B (Com3) Day-Care Centres Medical Uses Places of Entertainment</td> <td style="text-align: center;">0.95</td> <td style="text-align: center;">15</td> <td style="text-align: center;">No Max.</td> </tr> </tbody> </table>					<b><u>Discharge (T04)</u></b>	<b><u>Minimum (kl/month) (T05)</u></b>	<b><u>Maximum (kl/month) (T06)</u></b>	Offices (Com1) Offices	0.98	10	No Max. <b><u>TRADE EFFLUENT SURCHARGE</u></b>			
The Trade Effluent Surcharge shall be paid in addition to the normal hydraulic and fixed charges which apply for each property.			
(a) The monthly charge payable by the owner or occupier of any trade premises in respect of any trade effluent discharged into the Council's sewers shall be assessed by the Council on a monthly basis and shall be notified to such owner or occupier at the end of each month and shall be charged in accordance with the formula in paragraph (c) below.			
The Council shall base its monthly charge on the highest COD of one or more samples collected from the trade effluent samples point.			
(b) In case of trade premises from which effluent is discharged into the Council's sewer for the first time a charge shall be payable in respect of the interim period between the date of the first discharge and the last day of the month. Such charge shall be assessed in accordance with the formula prescribed in paragraph(c) below.			
(c) The charge payable in terms of paragraph (a) and (b) above shall be assessed according to the formula : $R=Vx[CA + B] + C X S X 10^{-3}$ where : R = The treatment cost. V = The volume of industrial effluent discharged from the premises during the cycle concerned in cubic metres A&B = The capital cost (interest and redemption) plus maintenance cost for the cycle concerned on the pipe system as used by the concerned consumer divided by the total flow for the cycle. The value of A being <b>74.43(excl VAT)</b> cents per cubic meter. The value of B being <b>64.32(excl VAT)</b> cents per cubic meter. C = The cost of treating one cubic meter of waste water. The value of C being <b>40.95(excl VAT)</b> cents per cubic meter. S = The average chemical oxygen demand in mg/l measured on the industrial effluent during the cycle			
(d) In the absence of any direct measurements, the volume quantity of trade effluent discharged into the sewer each month from any trade premises shall be estimated and determined by Council from the monthly quantity of water consumed on the premises concerned, whether obtained from the Council or from other sources, due allowance being made for water used for domestic purposes, water lost by reaction and water present in the final products manufactured.
