<b>SEWERAGE</b>	<b>780</b>			
<p>The sewerage charges are calculated on two main components per erf. The first portion is based on a fixed cost for each erf and the second portion is based on actual measured water consumption (hydraulic portion) for an erf.</p>				
<b>Fixed Charge</b>				

SERVICE DESCRIPTION	2023/24	2023/24	2022/23	%
	VAT Inclusive	15% Exclusive	15% Exclusive	Increase
	<b>R</b>	<b>R</b>	<b>R</b>	
<p>The <u>Fixed Charge</u> provides for costs on the sewerage operating budget such as charges for capital loan and interest payments and provision for a capital reserve fund. This cost is indicative of the installation /construction, rehabilitation and eventual replacement cost of the infrastructure. The cost is fixed for every property which has access to the municipal sewerage system irrespective of the property being vacant (no buildings) or, if the property uses the existing system, including the suction tanker service.</p> <p>The fixed cost component is therefore payable irrespective of the service being used by the consumer or not, therefore this charge will effectively replace the current "Availability Fee".</p> <p>The fixed charged per erf is based on the sewage conveyance and treatment cost for an average monthly water consumption per erf which is exceeded by 80% of consumers in the particular category.</p> <p><b>Hydraulic Charge</b> The proposed tariff will also obviate anomalies which exist currently whereby owners of properties in some consumer categories are heavily subsidising users in other categories. With the present tariff in certain instances domestic consumers are also subsidising commercial consumers.</p>				

SERVICE DESCRIPTION	2023/24	2023/24	2022/23	%
	VAT Inclusive	15% Exclusive	15% Exclusive	Increase
	R	R	R	
<p>The tariff will uniformly apply to all categories of consumers (Sewerage Service) throughout the municipality. Sewerage discharge will be calculated on actual metered water consumption that will be reduced by a “discharge factor” i.e, the ratio of kilolitres sewage discharged by each category of consumer, to be determined by the Director: Technical Services. Whilst a standard tariff per kl of sewage will be levied, the discharge factor applicable to the different categories may differ.</p> <p>The formula used to arrive at the new hydraulic tariff, is as follows:</p> <p>P = KVC where,  P = sewerage charge in Rand  K = effluent discharge factor  V = volume(kl) of potable water consumed  C = prescribed charge in Rand</p> <p><b><u>Rebate of 10% for –</u></b>  Bulk Consumers/ Private Developments &gt;2Ha, restricting admission, which pay bulk and “on-sell” to patrons within the development and which develop and maintain their own infrastructures.</p> <p>See table detailing categories and discharge factors below.</p> <p>The hydraulic portion of the sewerage charge consists of two components :</p> <p><b><u>Minimum Consumption Charge</u></b></p>				

SERVICE DESCRIPTION	2023/24	2023/24	2022/23	%
	VAT Inclusive	15% Exclusive	15% Exclusive	Increase
	R	R	R	
<p>This is the portion of the sewerage charge to provide for firm operating costs such as salaries, plant and equipment, etc and certain general expenses. The charge is the average cost per erf for a particular category and is based on the firm/fixed cost incurred by the Sewerage Service to operate the sewerage system irrespective of what volume of sewage is conveyed and treated.</p> <p>The minimum consumption charge is therefore also necessary irrespective of the service being used by the consumer continuously or infrequently.</p> <p>The first part of the hydraulic charge is calculated on a percentage of the minimum water consumption specified per erf for each category</p> <p>As from the 2013/2014 Financial Year, this cost has been included in the Fixed Charge Component</p> <p><b>Variable Consumption Charge</b>                      This is the portion of the sewerage charge to provide for the operating costs that vary depending on the amount/extent of consumption. Electricity consumption, pump maintenance and repairs, etc are typical costs that increase when the sewage flow increases.</p> <p>Nevertheless, during prolonged periods of low flow e.g. during a drought when water restrictions apply, the operating cost can actually increase although less sewage is discharged. Due to low flow the frequency of sewer blockages increases which requires more frequent sewer cleaning with high pressure jetting equipment as a preventative measure.</p>
