EXECUTIVE SUMMARY

Firm quotations are hereby requested from registered and accredited service providers with minimum specifications as detailed under paragraph 2: "Technical Requirements":

REQUEST FOR SUPPLY AND DELIVERY OF A DN250 PN16 HYDRAULIC ALTITUDE LEVEL CONTROL VALVE

1. SCOPE

This specification covers the supply and delivery to the Municipal Stores of a **DN250 PN16 hydraulically operated, diaphragm-actuated altitude level control valve**, Cla-Val, or approved

equivalent, complete with **CDS7 altitude pilot, pressure relief override, adjustable speed control and mechanical valve position indicator**.

The valve shall operate entirely hydraulically and shall require no external electrical power for normal operation.

2. TECHNICAL REQUIREMENTS

2.1 Main Valve

The main valve shall be a globe-pattern, hydraulically operated diaphragm control valve comprising a ductile iron body and cover with fusion-bonded epoxy coating suitable for potable water service.

The valve shall have **PN16 flanged connections to EN 1092-2**, stainless-steel internal trim and renewable resilient sealing components. Internal components shall be serviceable without removing the main valve body from the pipeline.

2.2 Altitude Level Control

The valve shall incorporate a **Cla-Val Stainless Steel CDS7 three-way diaphragm-actuated altitude pilot or approved equivalent**.

The pilot shall remotely sense the static hydrostatic head of the reservoir through a dedicated sensing line and shall:

- Maintain the main valve substantially open during reservoir filling.
- Automatically close the main valve when the predetermined maximum reservoir level/TWL is reached.
- Automatically reopen the main valve when reservoir level falls sufficiently below the high-level setting; and
- Require no mechanical float or electrical level-control equipment.

The reservoir sensing line shall be **minimum ¾-inch nominal bore**, independently connected to a point representative of true static reservoir head Scour) and installed to prevent trapped air or false pressure signals.

2.3 Pressure Relief Override

The valve shall incorporate an independently adjustable **hydraulic pressure relief override**.

Should the sensed upstream/system pressure exceed the predetermined relief setting, the relief control shall **override the altitude closing function and hydraulically cause the main valve to open**, thereby providing an emergency discharge path towards the reservoir.

Once system pressure has reduced below the relief setting, the override shall automatically relinquish control and normal altitude level control shall resume.

Relief Override Setting: 9 bar

2.4 Speed Control and Position Indication

The valve shall incorporate adjustable hydraulic speed control to regulate main valve opening/closing rates and minimise pressure transients and water hammer.

A **Cla-Val X101C-type mechanical visual position indicator or approved equivalent** shall be fitted to the main valve and mechanically connected to the valve stem to provide continuous visual indication of valve position/travel.

2.5 Complete Control Assembly

The valve shall be supplied as a complete factory-assembled hydraulic control system including, as a minimum:

CDS7 altitude pilot • Pressure relief override pilot/control • Opening/closing speed control • Pilot supply strainer/restriction • Pilot isolation valves • Stainless-steel pilot tubing and fittings • Reservoir sensing connection • Mechanical position indicator • All necessary hydraulic control accessories.

CERTIFICATE OF INDEPENDENT BID DETERMINATION - COMPULSORY

1. This Municipal Bidding Document (MBD) must form part of all bids[1] invited.

2. Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).[2] Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.

3. Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:

    a) take all reasonable steps to prevent such abuse;
    b) reject the bid of any bidder if that bidder or any of its directors has abused the
    c) supply chain management system of the municipality or municipal entity or has
    d) committed any improper conduct in relation to such system; and
    e) cancel a contract awarded to a person if the person committed any corrupt or
    f) fraudulent act during the bidding process or the execution of the contract.

4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.

5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD9) must be completed and submitted with the bid:

[1] Includes price quotations, advertised competitive bids, limited bids and proposals.
[2] Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
